

Deployment 41420_0910

(NDBC 41420 - North Santo Domingo - 328 NM NNE of Santo Domingo)

Location

Latitude: 23.496

Longitude: -67.32

Depth: 5739 m

Ocean region: 1.3 - Tropical Atlantic Ocean

Time Span

Start Date: 2009-11-13

End Date: 2010-04-03

Notes

Data downloaded from http://www.ndbc.noaa.gov/historical_data.shtml

An offset of 590 bar was removed from the raw pressure data.

Latitudes, longitudes and depths specific to this deployment were not available, so they are taken to be those shown for the latest deployment on webpage www.ndbc.noaa.gov/station_page.php?station=41420 as at 17/12/2014.

This instrument went adrift at some point after 30/11/2014.

For tsunameter data from the NDBC (largely from the Deep-Ocean and Reporting of Tsunamis network), information regarding deployment and recovery dates is limited. Therefore, annual files of quality controlled data are initially concatenated for each station and plotted in order to identify the start and end times of each deployment. The data are segmented into individual deployment time series, so the deployment and recovery dates are assumed dates.

Raw NDBC data have varying sampling frequencies depending upon the operating mode (i.e. whether there is a tsunami alert). Standard operating mode (1) uses 15 minute spot values, mode 2 data consists of 1 min averages of 4X15 sec spot values and mode 3 is 15 second sampling. Mode 3 data were sub-sampled to the frequency of mode 1, but mode 2 data were not compatible and were treated as missing.

Raw pressures were obtained in metres from NDBC but had been converted from psia using a conversion factor of 0.67. The true conversion should have used 0.68947573, so to convert to mb, we multiplied by $102.9 = 0.68947573 / 0.67 * 100$.

Channels

41420_0910 (Preferred Channel)

Parameter: pressure
